Gynecology and Pelvic Medicine

INSTRUCTION FOR AUTHORS

Thank you for your interest in Gynecology and Pelvic Medicine (GPM). Please consult the following instructions to help you prepare your manuscript, and feel free to contact us with any questions. To ensure the fast peer review and publication, manuscripts that do not adhere to the following instructions will be returned to the corresponding author for technical revision before undergoing peer review. We are looking forward to your submission.

1. ABOUT THE JOURNAL

Gynecology and Pelvic Medicine (ISSN 2617-4499; Gynecol Pelvic Med; GPM; gpm.amegroups.com) is an international peer-reviewed journal as the official journal of the West China Second University Hospital of Sichuan University, focusing on the gynecology and pelvic medicine from basic, translational to clinical researches. GPM is devoted to publication of basic and clinical research articles that concern every aspect in the field, including but not limited to the gynecological oncology, pelvic medicine and benign gynecological disease including infection, endometriosis, abnormality, endocrinology, etc. It aims to provide an international and comprehensive platform for academic and practitioner worldwide to share and exchange ideas concerning every aspect of the gynecology and pelvic medicine as well as to further prompt academic communication domestic and overseas.

Editorial Office

Email: gpm@amegroups.com

Publisher information
AME Publishing Company
Address: Rm C, 16/F, Kings Wing Plaza 1,No. 3 On Kwan Street, Shatin, NT, Hong Kong

2. MANUSCRIPT CATEGORIES

(1) Original Article
Word limit: 5,000 words maximum including abstract but excluding references, tables and figures.
Abstract: 450 words maximum, with sub-headers (background, methods, results and conclusions).
References: no maximum.
Figures/tables: no maximum, but 8 figures should be sufficient.
Videos: 3 (Max), playback time of all videos should be no more than 15 min; to be distributed amongst the videos as authors see fit.

Description: Originality and clinical impact are essential for acceptance of Original Articles. Such an article is to present original basic science or clinical research findings by the authors in the field of gynecology and pelvic medicine. The systematic review and meta-analysis in GPM is addressed as original article. The abstract should contain the following subheadings: Background, Methods, Results and Conclusions. Original articles should entail a section describing the contribution of each author to the manuscript as well as Statement of Ethics Approval. See section “AUTHORS’ CONTRIBUTION” and section “STATEMENT OF ETHICS APPROVAL” for details.

(2) Review Article
Word limit: 6,000 words maximum including abstract but excluding references, tables and figures.
Abstract: 450 words maximum, unstructured (no use of sub-headers).
References: no maximum.
Figures/tables: minimum 1 figure or table.
Description: Reviews are comprehensive analyses of specific topics. GPM emphasizes that an acceptable Review Article should not be a ‘book chapter’ generally covering a topic, but should be a focused application of literature to address a relevant clinical issue. The Editors submit them upon invitation. Proposals for reviews may be submitted; however, in this case authors should only send an outline of the proposed paper for initial consideration. Both solicited and unsolicited review articles will undergo peer review prior to acceptance. Review articles should entail a section describing the contribution of each author to the manuscript. See section “AUTHORS’ CONTRIBUTION” for details.

(3) Brief Report
Word limit: 2,500 words including abstract but excluding references, tables and figures.
Abstract: 250 words, unstructured (no use of sub-headers).
References: 35 maximum.
Figures/tables: 8 maximum.
Description: Manuscripts containing pertinent and interesting observations concerning Gynecology and Pelvic Medicine and reports on new observations or studies that do not warrant publication as a full research article will be considered for the Brief Reports. These submissions will undergo full peer review.

(4) Case Report
Word limit: 2,500 words maximum excluding references, tables and figures.
Abstract: 300 words maximum, unstructured (no use of sub-headers).
References: 20 maximum.
Figures/tables: 8 maximum.
Description: New observations of diseases, clinical findings or novel/unique treatment outcomes relevant to practitioners in gynecology and pelvic medicine covering all fields. The text should be arranged as follows: Introduction, Case Report, Discussion or Introduction, Patient selection and workup, Pre-operative preparation, Equipment preference card, Procedure, Role of team members, Post-operative management, Tips, Tricks and Pitfalls, Discussion. Only cases of exceptional interest and novelty are considered. For manuscripts that do not qualify, Editors may ask authors to shorten manuscripts and rewrite as Letters to the Editor.

(5) Editorial
Word Limit: 2,500 words maximum excluding references, tables and figures.
Abstract: not required for this manuscript type.
References: 25 maximum.
Figures/Tables: 2 maximum.
Description: Editorials are written by recognized leader(s) in the field. Editorials are generally solicited by the (Deputy) Editor(s)-in-Chief.

(6) Editorial Commentary
Word Limit: 2,500 words maximum excluding references, tables and figures
Authors: 5 (Max)
Abstract: Not required
References: 25 (Max), including the article discussed
Figures and Tables (combined): 2 (Max)
Description: The Editors will invite an expert in the field to discuss a paper or report or event within the past few months or so, or in the near future and provide a commentary on the importance of each accepted paper to outline its strengths and weaknesses. It should set the problems addressed by the paper/report/event in the wider context of the field.

(7) Letter to the Editor
Word limit: 1,000 words maximum excluding references, tables and figures.
Abstract: not required for this manuscript type.
References: 10 maximum.
Figures/tables: maximum 1 in total.
Description: Letters on content published in the Journal or on other topics of interest to our readers is welcomed. The journal might invite replies from the authors of the original publication, or pass on letters to these authors.

(8) Surgical technique
Word limit: 2,500 words (Max) excluding references, tables
Abstract: Unstructured. 250 words (Max)
References: 20 (Max)
Figures/tables: 8 (Max) in total
Videos*: 3 (Max)
Description: Surgical Technique is a featured section that publishes illustrated articles. These articles must include four subheadings – Abstract, Introduction, Operative Techniques and Comments. The body of the article should include 10-15 medical drawings or photos, accompanied by detailed legends, describing the operative procedures in a step-by-step format. Expert opinions regarding possible pitfalls and the comparison of the described procedure with other methods are encouraged. It is important to submit (1) the outline of your manuscript and (2) the attached graphics by the submission date. Illustrations in color are encouraged and the finalized graphics submitted will be printed at no cost to the authors.

(9) Meeting Report
Word limit: 4,000 words maximum including abstract but excluding references, tables and figures.
Abstract: 350 words maximum, unstructured (no use of subheaders).
References: no maximum.
Figures/tables: no maximum, but 8 figures should be sufficient.
Description: Brief reports of symposia and conferences in related to gynecology and pelvic medicine. Reports must be submitted within 2 months of the meeting date in order to maintain their timeliness. Only those Meeting Reports dealing with topics of interest to the readership and that contain novel information and insights from the meeting are accepted for publication. A Meeting Report should be a thoughtful, critical commentary which shows an appreciation of the connections among the various presentations and reveals the consensus, if any, which emerged at the meeting. Before submitting a full Meeting Report, authors should only send an outline of the proposed paper for initial consideration.

(10) Clinical Guideline
Word limit: 6,000 words maximum including abstract but excluding references, tables and figures.
Abstract: 450 words maximum, unstructured (no use of subheaders).
References: no maximum.
Figures/tables: no maximum.
Description: Guidelines need to be the product of a large group of individuals who are recognized authorities in their field. Guidelines will be written by a working party to include a steering committee (usually at least 4 members) and other authors representing a wide range of those with special relevant expertise as well as those whose everyday practice will be influenced by the guidelines.

3. STRUCTURE OF THE MANUSCRIPT
The length of manuscripts must adhere to the specifications under the section “MANUSCRIPT CATEGORIES”. Manuscripts should be presented in the following order:(i) title page, (ii) abstract and key words, (iii) text, (iv) acknowledgments, (v) footnote, (vi) references, (vii) supplementary material, (viii) figure legends, (ix) tables (each table complete with title and footnotes) and (x) figures (it is recommended that figures, tables and videos are provided in separate files).

TITLE PAGE
The title page should include
• The title of the paper. Concise titles are easier to read than long, convoluted ones. Titles that are too short may, however, lack important information, such as study design (which is particularly important in identifying randomized controlled trials). Authors should include all information in the title that will make electronic retrieval of the article both sensitive and specific (no abbreviations allowed).
• The full names of the authors and the addresses of the institutions at which the work was carried out (in English).
• The full postal and email address, plus facsimile and telephone numbers, of the corresponding author.
• A short running title (less than 60 characters) should also be provided.
• Author’s Contribution. In keeping with the latest guidelines of the International Committee of Medical Journal Editors, for the original article, review article and systematic review/meta-analysis, the information of author contribution is needed (See section “Author’s Contribution” for details).

ABSTRACT AND KEYWORDS
The abstracts must adhere to the specifications under the section Manuscript Categories. The abstract of an original
article, review article, systematic review and meta-analysis, should be structured into four paragraphs with sub-headers of background, methods, results and conclusions. The abstracts for all the other manuscript types should be unstructured. The abstract should not contain any abbreviations or acronyms, as well as citations of reference, figures or tables. And general statements (e.g. “the significance of the results is discussed”) should be avoided. Following the Abstract, 3-5 keywords should be given.

The text part should be arranged into short/sharp paragraphs, which are best suited for reading on-screen. Authors must use the following sub-headers to divide the sections of their Original Article manuscript: Introduction, Methods, Results, Discussion, Acknowledgment, Footnote, References, and when relevant, Supplementary Material. Plus, authors should follow the same structures in systematic review and meta-analysis. However, review, editorial and others do not have those clear sections, they can be written in several sections with their own headers according to the topic (see detailed requirements in the previous section “MANUSCRIPT CATEGORIES”).

If an article describes any procedure, technology or apparatus that is new, has not been used in the indication described, or is being used for a purpose for which it was not originally intended, it is the responsibility of the authors to ensure that all ethical committee, institutional review board, and/or governing body approval has been properly obtained. Such approval must be explicitly stated in the main text. The text should be keyed double-spaced throughout. A clearly readable font should be used (e.g. Arial, Calibri, Times New Roman, Verdana). Font size should be 10 or 12. Pages should be numbered. Language should be English. Spelling can be British or American, but consistent throughout. Any abbreviations should be defined on first usage in the text. Terms that are mentioned less than 3 or 4 times in the text should not be abbreviated.

The “AUTHORS’ CONTRIBUTION” section should be completed as follow:
1) Conception and design:
2) Administrative support:
3) Provision of study material or patients:
4) Collection and assembly of data:
5) Data analysis and interpretation:
6) Manuscript writing: All authors.
7) Final approval of manuscript: All authors.

Note: 1. Manuscript writing part and Final approval of manuscript part are required to be included while other parts are based on actual applicability; 2. Contribution is not required when there is only one author.

ACKNOWLEDGMENTS
a. All contributors who do not meet the criteria for authorship should be listed in an acknowledgments section. Examples of those who might be acknowledged include a person who provided purely technical help, writing or language editing assistance, or a department chairman who provided only general support. Financial and material support should also be acknowledged.

b. Funding: Details of all funding sources for the work in question should be included in the Acknowledgment section. The following rules should be followed: The sentence should begin: “This work supported by...”;

Grant numbers should be given in brackets as follows: “[grant number XXX]”. Multiple grant numbers should be separated by a comma as follows: “[grant numbers XXX, YYY]”. Agencies should be separated by a semi-colon (plus “and” before the last funding agency).

Where individuals need to be specified for certain sources of funding the following text should be added after the relevant agency or grant number “to [author initials]”; An example is given here: “This work was supported by the
c. When there is nobody or funding to be acknowledged, please describe as “None”.

FOOTNOTE
a. Conflicts of Interest: See section “Conflicts of Interest” for details.
b. Financial Disclosure: Some variables, such as “measures of income inequality and degree of financial openness, are not included in our study because of the limited availability of good quality data across countries over the sample period”. When there is no financial disclosure, this section should be removed.

REFERENCES
A list of references to the literature should be arranged sequentially following appearance in the text. Personal communications, and unpublished data should not be included in the list of references, but can be mentioned in the text.

The Vancouver system of referencing should be used (examples are given below). In the text, references should be cited using Arabic numerals in round brackets in which they appear consecutively [e.g. “cancer-related mortality (19)”; “heart failure (29,30)”). If cited in tables or figure legends, number according to the first identification of the table or figure in the text. In the reference list, cite the names of all authors when there are three or fewer; when three or more, list the first three followed by et al.

Do not use ibid. or op cit. Reference to unpublished data and personal communications should not appear in the list but should be cited in the text only (e.g. Smith A, 2000, unpublished data). All citations mentioned in the text, tables or figures must be listed in the reference list. Names of journals should be ab-breviated in the style used in Pubmed. Authors are responsible for the accuracy of the references.

The format of reference sees as follow.

• Journal article

• Online article not yet published in an issue
An online article that has not yet been published in an issue (therefore has no volume, issue or page numbers) can be cited by its Digital Object Identifier (DOI). The DOI will remain valid and allow an article to be tracked even after its allocation to an issue.

• Book

• Chapter in a Book
e.g., Gilchrist RK. Further commentary: Continent stroma. In: King LR, Stone AR, Webster GD (eds). Bladder Reconstruction and Continent Urinary Diversion. Year Book Medical, Chicago, 1987; 204-5.

• Online publications
or

TABLES
Table should be self-contained and complement, but not duplicate information contained in the text. All tables should be numbered consecutively in the order of reference in the text. Each Table should be on a separate page; tables must be typed and editable in tabular form that is convenient for copyediting and typesetting; and they should not be inserted as images.

Each column must carry an appropriate heading and, if measurements are given, the units should be given in the column heading. Column headings should be brief, with units of measurement in parentheses; all abbreviations must be defined in footnotes. Footnote symbols: †, ‡, §, ¶, should be used (in that order) and *, **, *** should be reserved for P-values. Statistical measures such as SD or SEM should be identified in the headings. If tables have been reproduced from another source, a letter/permission from the copyright holder (usually the Publisher), stating authorization to reproduce the material, must be submitted as supplemental materials during paper submission.

FIGURES
All illustrations (line drawings and photographs) are
classified as figures. Figures should be numbered consecutively in the order of reference in the text. Figures should be provided separately. Magnifications should be indicated using a scale bar on the illustration. If figures have been reproduced from another source, a letter/permission from the copyright holder (usually the Publisher), stating authorization to reproduce the material, must be submitted as supplemental materials.

Size: Figures should be sized to fit within the page column (82 mm), intermediate (118 mm) or the full text width (173 mm).

Specifications: Figures must be supplied as high resolution saved as .eps, .tif or .jpg; 300 dpi (dots per inch), figures containing text 400 dpi, Line figures 1,000 dpi. Pixel screen width: 1280, grayscale for black and white, RGB for color.

Line figures: Must be sharp, black and white graphs or diagrams, drawn professionally or with a computer graphics package.

Text sizing in figures: Lettering must be included and should be sized to be no larger than the journal text or 8 point (Should be readable after reduction – avoid large type or thick lines). Line width between 0.5 and 1 point.

Figure legends: Type figure legends on a separate page. Legends should be concise but comprehensive – the figure and its legend must be understandable without reference to the text. Include definitions of any symbols used and define/explain all abbreviations and units of measurement.

APPENDIX

The supplementary appendix should be paginated, with a table of contents, followed by the list of investigators (if there is one), text (such as methods), figures, tables, and then references. The supplementary appendix should not be included in the article’s reference list.

The appendix must be submitted in a Word file. The appendix will not be edited for style. It will be presented online as additional information provided by the authors.

The published article will contain a statement that supplementary material exists online and will provide the reader with a URL and link. To reference the supplementary appendix in the text of the article, refer to it as in the following example:

“Many more regressions were run than can be included in the article. The interested reader can find them in a supplementary appendix online”.

EQUATIONS

Equations should be numbered sequentially with Arabic numerals; these should be ranged right in parentheses. All variables should appear in italics. Use the simplest possible form for all mathematical symbols.

4. STYLE OF THE MANUSCRIPT

Manuscripts must follow the style of the Vancouver agreement detailed in the International Committee of Medical Journal Editors’ revised ‘Uniform Requirements for Manuscripts Submitted to Biomedical Journals: Writing and Editing for Biomedical Publication’, as presented at: http://www.ICMJE.org/.

Author name: Each author’s given name should be followed by family name. Capitalize each letter of the Family name. A hyphen could be used in Family name according to the rule in Author region. Capitalize the first letter of those words/syllables that they hope to be abbreviated in their given name, otherwise, DO NOT captilize the first letter and use a hyphen to connect it with its anterior word.

Spelling: The Journal uses US spelling and authors should therefore follow the latest edition of the Merriam–Webster’s Collegiate Dictionary.

Units: All measurements must be given in SI or SIderived units. For more information about SI units, please go to the Bureau International des Poids et Mesures (BIPM) website at: http://www.bipm.fr.

Abbreviations: Must be used sparingly – only where they ease the reader’s task by reducing repetition of long, technical terms. Initially use the word in full, followed
by the abbreviation in parentheses. Thereafter use the abbreviation only.
Trade names: Drugs should be referred to by their generic names. If proprietary drugs have been used in the study, refer to these by their generic name, mentioning the proprietary name, and the name and location of the manufacturer, in parentheses.

5. REVIEW PROCESS
Manuscripts are assigned sequentially to Science Editors. An Science Editor solicits reviewers (typically, two external reviews are sought). The reviewers’ evaluations and Science Editor’s comments are compiled by the Editor-in-Chief for disposition and transmittal to the authors. A decision is made usually within four weeks of the receipt of the manuscript. The Editor-in-Chief will advise authors whether a manuscript is accepted, should be revised or is rejected. Minor revisions are expected to be returned within two weeks of decision; major revisions within three weeks. Manuscripts not revised within these time periods are subject to withdrawal from consideration for publication unless the authors can provide extenuating circumstances. A number of manuscripts will have to be rejected on the grounds of priority and available space. A manuscript maybe returned to the authors without outside review if the Editor-in-Chief and Science Editor find it inappropriate for publication in the Journal. Similarly, the Editors may expedite the review process for manuscripts felt to be of high priority in order to reach a rapid decision. Such ‘fast track decisions’ will normally occur within one week of receipt of the manuscript. Authors may provide the Editor-in-Chief with the names, addresses and email addresses of up to three suitably qualified individuals of international standing who would be competent to referee the work, although the Editor-in-Chief will not be bound by any such nomination. Likewise, authors may advise of any individual who for any reason, such as potential conflict of interest, might be inappropriate to act as a referee, again without binding the Editor-in-Chief. The Editor-in-Chief’s decision is final. If, however, authors dispute a decision and can document good reasons why a manuscript should be reconsidered, a rebuttal process exists. In the first place, authors should write to the Editor-in-Chief. All journals Manuscripts should be written in a clear, concise, direct style so that they are intelligible to the professional reader who is not a specialist in the particular field. When contributions are judged as acceptable for publication, the Editor and the Publisher reserve the right to modify manuscripts to eliminate ambiguity and repetition and improve communication between authors and readers.

If extensive alterations are required, the manuscript will be returned to the author for revision.

6. ETHICAL CONSIDERATIONS
Authors must state that the protocol for the research project has been approved by a suitably constituted Ethics Committee of the institution within which the work was undertaken and that it conforms to the provisions of the Declaration of Helsinki (as revised in Edinburgh 2000), available at: http://www.wma.net/en/30publications/10policies/b3/. The journal retains the right to reject any manuscript on the basis of unethical conduct of either human or animal studies. All investigations on human subjects must include a statement that the subject gave informed consent. Patient anonymity should be preserved. Photographs need to be cropped sufficiently to prevent human subjects being recognized (or an eye bar should be used).
In general, submission of a case report should be accompanied by the written consent of the subject (or parent/guardian) before publication; this is particularly important where photographs are to be used or in cases where the unique nature of the incident reported makes it possible for the patient to be identified. While the Editorial Board recognizes that it might not always be possible or appropriate to seek such consent, the onus will be on the authors to demonstrate that this exception applies in their case. Any experiments involving animals must be demonstrated to be ethically acceptable and where relevant conform to national guidelines for animal usage in research.

7. STATEMENT OF ETHICS APPROVAL
Statement of Ethics Approval: We require every research article submitted to include a statement that the study obtained ethics approval (or a statement that it was not required and why), including the name of the ethics committee(s) or institutional review board(s), the number/ID of the approval(s), and a statement that participants gave informed consent before taking part. The statement should be described in the method section.
* When concerning experiments on human subjects, authors should indicate whether the procedures followed were in accordance with the ethical standards of the responsible committee on human experimentation (institutional and national). Furthermore, authors also need to confirm that the patient has given their consent for the publication. The editorial office may request copies of the informed consent documentation at any time. We recommend the following wording used for the consent section as: “Written informed consent was obtained from the patient for publication of this article and any accompanying images. A copy of the
written consent is available for review by the Editors-in-Chief of this journal.”

* When concerning experiments on animals, authors should be asked to indicate whether the institutional and national guide for the care and use of laboratory animals was followed.

8. INFORMED CONSENT
Identifying information, including names, initials, or hospital numbers, should not be published in written descriptions, photographs, or pedigrees unless the information is essential for scientific purposes and the patient (or parent or guardian) gives written informed consent for publication. Informed consent is required for Case report, original/research articles and visualized surgery. The statement could be included in the footnote. It may be possible to publish without explicit consent if the report is important to public health (or is in some other way important); consent would be unusually burdensome to obtain; and a reasonable individual would be unlikely to object to publication (all three conditions must be met).

9. PERMISSION TO REPRODUCE FIGURES AND EXTRACTS
Permission to reproduce copyright material, for print and online publication in perpetuity, must be cleared and if necessary paid for by the author; this includes applications and payments to DACS, ARS and similar licensing agencies where appropriate. Evidence in writing that such permissions have been secured from the rights-holder must be made available to the editors. It is also the author’s responsibility to include acknowledgements as stipulated by the particular institutions. Please note that obtaining copyright permission could take some time. For a copyright prose work, it is recommended that permission is obtained for the use of extracts longer than 400 words; a series of extracts totaling more than 800 words, of which any one extract is more than 300 words; or an extract or series of extracts comprising one-quarter of the work or more.

10. AUTHORS’ RESPONSIBILITY AND POLICIES ON CONFLICT OF INTEREST
(1) Authors’ responsibility
We ask all authors to confirm that: 1) they have not previously published or have not submitted the same manuscript elsewhere, 2) they took a significant part in the work and approved the final version of the manuscript, 3) they have complied with ethical standards, 4) they agree AME publishing company, to get a license to publish the accepted article when the manuscript is accepted, and 5) they have obtained all necessary permissions to publish any figures or tables in the manuscript.

(2) Conflicts of Interest
Our journal complies with the International Committee of Medical Journal Editors’ uniform requirements on Conflict of Interest statement. Conflict of Interest exists when an author (or the author’s institution), reviewer, or editor has financial or personal relationships with other persons or organizations that inappropriately influence (bias) his or her actions. The existence of such relationships does not necessarily represent true conflict of interest. The potential for conflict of interest can exist whether or not an individual believes that the relationship affects their judgment. Financial relationships (such as employment, consultancies, stock ownership, honoraria, paid expert testimony, patents) are the most easily identifiable conflicts of interest and the most likely to undermine the credibility of the journal, the authors, and of science itself (http://www.icmje.org/index.html). Conflict of interest would be included in the FOOTNOTE section.

1) Participants
All participants in the peer-review and publication process—not only authors but also peer reviewers, editors, and editorial board members of journals—must consider their conflicts of interest when fulfilling their roles in the process of article review and publication and must disclose all relationships that could be viewed as potential conflicts of interest.

a. Authors
When authors submit a manuscript of any type or format they are responsible for disclosing all financial and personal relationships that might bias or be seen to bias their work.

b. Peer Reviewers
Reviewers should be asked at the time they are asked to critique a manuscript if they have conflicts of interest that could complicate their review. Reviewers must disclose to editors any conflicts of interest that could bias their opinions of the manuscript, and should recuse themselves from reviewing specific manuscripts if the potential for bias exists. Reviewers must not use knowledge of the work they’re reviewing before its publication to further their own interests.

c. Editors and Journal Staff
Editors who make final decisions about manuscripts should recuse themselves from editorial decisions if
they have conflicts of interest or relationships that pose potential conflicts related to articles under consideration. Other editorial staff members who participate in editorial decisions must provide editors with a current description of their financial interests or other conflicts (as they might relate to editorial judgments) and recuse themselves from any decisions in which a conflict of interest exists. Editorial staff must not use information gained through working with manuscripts for private gain. Editors should publish regular disclosure statements about potential conflicts of interests related to the commitments of journal staff. Guest editors should follow these same procedures.

2) Reporting Conflicts of Interest
Articles should be published with statements or supporting documents, declaring:
• Authors' conflicts of interest; and
• Sources of support for the work, including sponsor names along with explanations of the role of those sources if any in study design; collection, analysis, and interpretation of data; writing of the report; the decision to submit the report for publication; or a statement declaring that the supporting source had no such involvement; and
• Whether the authors had access to the study data, with an explanation of the nature and extent of access, including whether access is on-going.

To support the above statements, editors may request that authors of a study sponsored by a funder with a proprietary or financial interest in the outcome sign a statement, such as “I had full access to all of the data in this study and I take complete responsibility for the integrity of the data and the accuracy of the data analysis.”

If there is conflict of interest for the authors, authors must state conflict of interest based on the actual condition; if there is no conflict of interest, state conflict interest section as the following format: “The author has no conflicts of interest to declare.” or “The authors have no conflicts of interest to declare.”

11. CLINICAL TRIALS REGISTRY
We require, as a condition of consideration for publication, registration in a public trials registry. Trials must register at or before the onset of patient enrollment. This policy applies to any clinical trial starting enrollment after January 1, 2006. For trials that began enrollment before this date, we require registration by April 1, 2006, before considering the trial for publication. We define a clinical trial as any research project that prospectively assigns human subjects to intervention or comparison groups to study the cause-effect relationship between a medical intervention and a health outcome. Studies designed for other purposes, such as to study pharmacokinetics or major toxicity (e.g., phase 1 trials) are exempt.

We do not advocate one particular registry, but registration must be with a registry that meets the following minimum criteria: (1) accessible to the public at no charge; (2) searchable by standard, electronic (Internet-based) methods; (3) open to all prospective registrants free of charge or at minimal cost; (4) validates registered information; (5) identifies trials with a unique number; and (6) includes information on the investigator(s), research question or hypothesis, methodology, intervention and comparisons, eligibility criteria, primary and secondary outcomes measured, date of registration, anticipated or actual start date, anticipated or actual date of last follow-up, target number of subjects, status (anticipated, ongoing or closed) and funding source(s).

Registries that currently meet these criteria include: (1) the registry sponsored by the United States National Library of Medicine (www.clinicaltrials.gov); (2) the International Standard Randomized Controlled Trial Number Registry (http://www.controlled-trials.com); (3) the Australian Clinical Trials Registry (http://www.actr.org.au); (4) the Chinese Clinical Trials Register (http://www.chictr.org); and (5) the Clinical Trials Registry – India (http://www.ctri.in).

12. RANDOMIZED CONTROLLED TRIALS
Reporting of randomized controlled trials should follow the guide-lines of The CONSORT Statement: http://www.consort-statement.org

13. COPYRIGHT
AME Publishing Company owns copyright to papers accepted for publication in AOS. Copyright materials cannot be reused or printed without consent from the publishing company. To obtain any permission, please contact gpm@amegroups.com; permissions@amegroups.com.

The author will be granted to use materials of the article without any cost but application is still required.

14. SUBMISSION OF MANUSCRIPTS
Manuscripts must be submitted online at: http://gpm.amegroups.com/login

Authors must supply an email address as all correspondence will be by email.

General
All articles submitted to the Journal must comply with these
instructions. Failure to do so will result in return of the manuscript and possible delay in publication.
• Submissions must be double-spaced.
• All margins should be at least 30 mm.
• All pages should be numbered consecutively in the top right-hand corner, beginning with the title page.
• Do not use Enter at the end of lines within a paragraph.
• Turn the hyphenation option off; include only those hyphens that are essential to the meaning.
• Specify any special characters used to represent nonkeyboard characters.
• Take care not to use l (ell) for 1 (one), O (capital o) for 0 (zero) or ß (German esszett) for (Greek beta).
• Use a tab, not spaces, to separate data points in tables. If you use a table editor function, ensure that each data point is contained within a unique cell (i.e. do not use carriage returns within cells).

Each figure should be supplied as a separate file, with the figure number incorporated in the file name. For submission, low-resolution figures saved as .jpg or .bmp files should be uploaded, for ease of transmission during the review process. Upon acceptance of the article, high resolution figures (at least 300 d.p.i.) saved as .eps or .tif files should be uploaded. Digital images supplied only as low-resolution files cannot be used for publication.

Covering Letter
Papers are accepted for publication in the Journal on the understanding that the content has not been published or submitted for publication elsewhere except as a brief abstract in the proceedings of a scientific meeting or symposium. This must be stated in the covering letter. The covering letter must also contain an acknowledgment that all authors have contributed significantly, and that all authors are in agreement with the content of the manuscript. In keeping with the latest guidelines of the International Committee of Medical Journal Editors, each author’s contribution to the paper is to be quantified.

Suggest Reviewers
Authors could suggest three reviewers to the Editorial Office during the online submission of the manuscript.

15. PROOFS
It is essential that corresponding authors supply an email address to which correspondence can be emailed while their article is in production. Notification of the URL from where to download a Portable Document Format (PDF) typeset page proof, associated forms and further instructions will be sent by email to the corresponding author. The purpose of the PDF proof is a final check of the layout, and of tables and figures. Alterations other than the essential correction of errors are unacceptable at PDF proof stage. The proof should be checked, and approval to publish the article should be emailed to the Publisher by the date indicated, otherwise, it may be signed off by the Editor or held over to the next issue. Acrobat Reader will be required in order to read the PDF. This software can be downloaded (free of charge) from the following Web site: http://www.adobe.com/products/acrobat/readstep2.html. This will enable the file to be opened, read on screen, and printed out in order for any corrections to be added. Further instructions will be sent with the proof.

16. OFFPRINTS AND HARD COPIES

a. Minimum orders of 100 offprints will be provided upon request, at the author’s expense. If you have queries about offprints please email gpm@amegroups.com.

b. To subscribe the hard copies of the journal, please email gpm@amegroups.com.

17. NO PUBLICATION FEES
There is no fee involved throughout the publication process. The acceptance of the article is based on the merit of quality of the manuscripts.

18. TRACKING MANUSCRIPTS

1) Before Acceptance
Authors can track your manuscript’s progress through the review process at: gpm.amegroups.com after logging in your account.

2) After Acceptance
Author Services enables authors to track their article, once it has been accepted, through the production process to publication online and in print. Authors can check the status of their articles online and choose to receive automated emails at key stages of production so they do not need to contact the production editor to check on progress.

19. GPM ONLINE
For more information, please visit the journal home page at: gpm.amegroups.com.
If you have any questions, please feel free to contact us thought the email: gpm@amegroups.com
